

*******DRAFT*******

Testing C code with Ultibo Bare Metal, Ultibo TFTP and Ultibo Bitmaps
01/24/17

*******DRAFT*******

Goal: This is hopes of improving the speed of computing the JPEG 2000. The RPi2B or RPi3B will run Ultibo Bare Metal.

To transfer images over an Ethernet connection to a RPi2B or RPi3B.

Perform the JPEG 2000 lifting step which is the first step in the JPEG 2000.

The C code which which performs the Lifting step was develop by

Dan Gisselquist, Ph.D.

Gisselquist Technology, LLC

The C code that performs the DWT Lifting Step runs on x86_64 6 core is considerably faster.

time ./liftmain lena_rgb_512.png

real 0m0.090s

user 0m0.043s

sys 0m0.009s

The C code that performs the DWT Lifting Step runs on the x86_64 dual core and RPi3B is approximately the same.

On x86_64 dual core

time ./liftmain lena_rgb_512.png

real 0m0.356s

user 0m0.209s

sys 0m0.040s

On a RPi3B

./time ./liftmain lena_rgb_512.png

real 0m0.380s

user 0m0.230s

sys 0m0.010s

Status: Several Ultibo examples have been merged into a 4 program which displays a bitmap, calls a C library, and provides a TFTP server.

Topleft is where the C routine is **being** called. Bottomleft is a 512 x 512 bitmap
In the file test.c the contents of lifing.c
In the topright is the tftp process.
ultibo-tftp

A reasonably quick method of transferring files in an Ultibo project.
It uses Trival FTP based on RFC 1350
Approx upload times around 16 secs for kernel7.img of approx 2.2 MB

```
tftp 192.168.1.185
tftp> binary
tftp> put grn-out.32t
Sent 1048576 bytes in 4.0 seconds
tftp> get grn-out.32t xx
Received 1048580 bytes in 4.0 seconds
tftp> quit
```

<https://github.com/pjde/ultibo-tftp.git>

```
extern void  singlelift(int rb, int w, int * const ibuf, int * const obuf);
extern void  ilift(int rb, int w, int * const ibuf, int * const obuf);
extern void  lifting(int w, int *ibuf, int *tmpbuf);
```

This is needed to add the fpc compiler to the PATH.

```
export PATH=/home/pi/ultibo/core/fpc/bin:$PATH
echo $PATH
/
home/pi/ultibo/core/fpc/bin:/usr/local/sbin:/usr/local/bin:/usr/sbin:/usr/bin:/sbin:/bin:/usr/local/games:/u
sr/games
```

```
arm-none-eabi-gcc -O2 -mabi=aapcs -marm -march=armv7-a -mfpv3-d16 -mfloat-abi=hard -c
test.c
```

```
arm-none-eabi-ar rcs libtest.a test.o
```

```
fpc -vi -B -Tultibo -Parm -CpARMV7A -WpRPI2B @/home/pi/ultibo/core/fpc/bin/rpi2.cfg -O2
LibCTestRPI2.lpr
```

```
./build_liftmain.sh compiles lifting.c & liftmain.c --> liftmain
```

```
iftmain lena_rgb_512.png  
red-out.32t
```

line 101 lifting.c `const int LVLS = 1;` performs 1 level forward DWT

lines 230-246 in lifting.c when commented does not perform the inverse DWT.

```
/*  
    for(lvl=(LVLS-1); lvl>=0; lvl--) {  
        int      offset;  
  
        w <=<= 1;  
  
        if (lvl)  
            offset = ov[lvl-1];  
        else  
            offset = 0;  
        ip = &ibuf[offset];  
        tp = &tmpbuf[offset];  
  
        ilift(rb, w, ip, tp);  
        ilift(rb, w, tp, ip);  
    }  
*/
```

The image above is 1 level forward DWT red subband
The file red-out.32t

The image above is 3 levels forward DWT red subband
The file red-out.32t

The image above is 1 level forward DWT grn subband
The file grn-out.32t

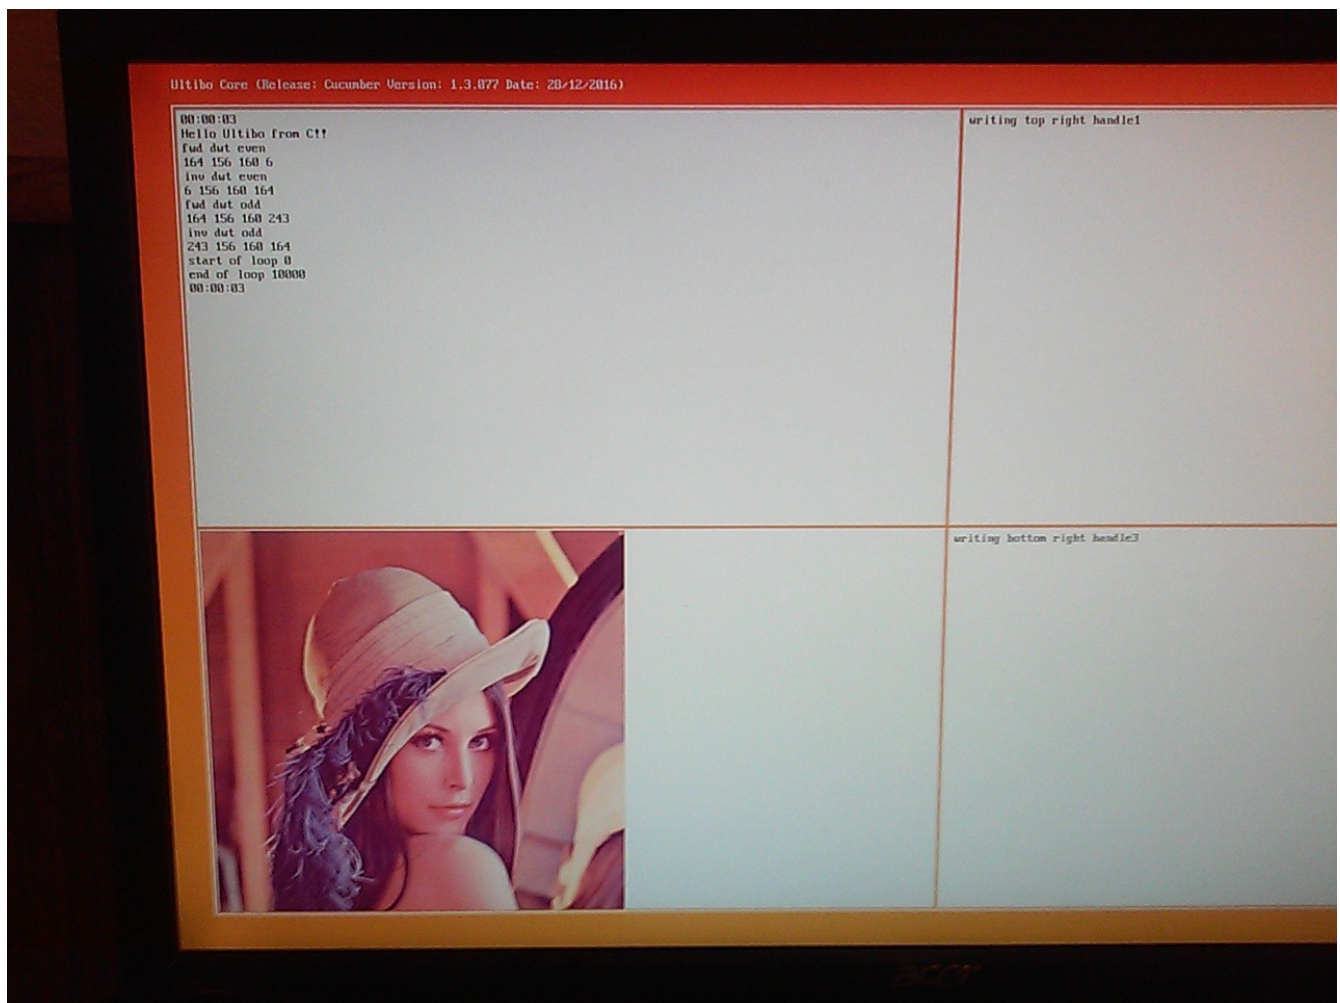

The image above is 3 levels forward DWT grn subband
The file grn-out.32t

The image above is 1 level forward DWT blu subband
The file blu-out.32t

The image above is 3 levels forward DWT blu subband
The file blu-out.32t

The above image is the running on RPi3B as compiled for RPi2B on 01/23/17.
